

Aguatronics™ Canon

High Volume Controlled Humidification System

Increases humidity up to **75%** without wetness

The Aguatronics™ Canon Humidity Control System

Aguatronics™ smart humidity system efficiently optimizes relative humidity, while controlling water and energy consumption. Its patented nozzle technology uses air to precisely atomize water.

Pressured air and water combine in the nozzle resulting in a fine, dry fog. This humidifies the environment without wetting surfaces. Our fully-customizable system can be used for any humidification application.

Why humidify?

Cigars are hygroscopic, which means they absorb and retain moisture from their surrounding environment. A good tasting cigar relies on the subtle interplay between the sugars, oils, and tobacco in the cigar, all of which are affected if the cigar is too dry or too damp.

The Aguatronics™ Advantage

- Patented nozzle design evenly distributes fine fog (as small as 6-10 microns)
- Able to humidify any size humidor, storage room or warehouse
- Low maintenance
- 100% water efficiency - All water evaporates; No wetness
- Plug-and-play module that only requires air and water source
- Requires low air (30PSI) and water (40PSI) operating pressures
- Non-clogging, large nozzle orifice with reverse osmosis filtration
- No standing water tanks - No risk of bacterial colonization

Aquatronics™ System

- ✓ Able to humidify any size humidifier, storage room or warehouse.
- ✓ Prefabricated mounting brackets
- ✓ Easily maintains 65% to 75% relative humidity
- ✓ Water discharge: 0.5 gal/hr
- ✓ Droplet size: 6-10 microns

Aquatronics™ locks
in the **flavor** and
maintains the **quality**
of every **cigar**

Benefits of humidity

- ✓ Maintains flavor without sacrificing quality
- ✓ Locks in the essential oils and flavor
- ✓ Ensures a proper steady burn
- ✓ Improves cigar sales
