

The SaniCart™ releases a fine, dry fog for complete air and surface disinfection.

Next Generation Mobile Sanitization Dispenser

SaniCart™ is a mobile, fogging sanitization system, used to protect against surface and airborne viral, bacterial, and mold contamination. The SaniCart™ technological breakthrough involves a patented micro-fog nozzle, which humidifies the entire room with a variety of disinfecting agents that have been approved to be used as a fog, including peracetic acid (PAA), hydrogen peroxide, and chlorine dioxide.*

Compared to hand-held or aerosol sprayers, this fine disinfecting fog efficiently covers the complete indoor environment and settles on all surfaces and hard-to-reach areas without residues.

SaniCart™ technology helps reduce human error and minimize user exposure to sanitizing chemicals and pathogens, while also saving time, money, and labor.

* Follow chemical manufacturer guidelines for safety and use.

✓ EFFECTIVE

6-10 micron droplets remain suspended in the air and then settle on surfaces without leaving wetness or damaging residue

✓ EFFICIENT

Gets in all the nooks and crannies without excess waste

✓ VERSATILE

Easy maneuverability allows it to work in any environment where effective sanitation is required

✓ ECONOMICAL

Fraction of the cost compared to manual hand held sanitation processes. Proactive approach for preventing liability of cross contamination

One system with two delivery methods for applications in virtually any industry

Stationary method

Simplistic design allows the user to move from room to room and set an automated sanitization protocol to deliver a disinfectant of choice.

Handheld method

Users have the capability of detaching the fogger and directly targeting a contaminated area. The fog momentum create a 5 ft throw that ensure that disinfectant gets deep into the concentrated area.

Specs and Features:

- Adjustable auto Start/Stop timer
- Powder coated steel frame
- Hard rubber wheels
- Fully adjustable and detachable fog nozzle
- Spray flow rate of 0.5 - 1.0 GPH
- Dimensions: 11" x 18" x 32"

System Options:

- Large compressor for higher fog volume and trajectory
- Droplet size can be adjusted at the factory per preference for more or less wetness
